📍 Location: Tel-Aviv, IL

Summary

Infrastructure / Networking DevOps Engineer with hands-on experience building and operating **Linux** setups, secure remote-access services and **networking-heavy** self-hosted platforms. Strong practical background in **Docker**, **TCP/IP**, **DNS**, **traffic routing**, **VPN** tunneling, **observability** and **CI/CD** automation. Built systems from scratch and improved **service reliability** across stable, maintainable environments serving real users.

Interested in infrastructure operations, Linux administration, network services, and secure connectivity in networking-heavy DevOps roles.

Experience

Automation Engineer	Padani Jewelers (E-commerce)	2022-2026
- Led automation for a Magento-to-Shopify migration, designing data flows and batch processing routines that reduced large catalog deployment time by approx. 60%. - Developed and maintained a Python ETL pipeline for extracting, validating, normalizing, and transforming product data, improving consistency and reducing operational overhead. - Automated asset collection from vendor and brand sources, applying SKU-level naming standards, packaging rules, and structured handoff into downstream business-critical systems. - Operated recurring workloads on Linux using cron, SQLite state tracking, and automated dataset generation, increasing resilience and reducing repetitive manual work. - Built an AWS microservices platform with infrastructure provisioned through Terraform, workloads deployed to managed Kubernetes, and releases managed with Helm. - Added GitLab CI/CD, Prometheus, and Grafana to automate delivery, improve observability, and strengthen rollout visibility and platform reliability.		

Projects

VPS Connectivity Platform

- Built and operated a **VPS-hosted Docker setup** delivering **secure connectivity** for **40+ active users**.
- Deployed and maintained networking-heavy components including **VPN**, **DNS filtering**, and Telegram-based utility tools in a **Linux environment**.
- Configured **traffic routing** and **reverse proxying** with **HAProxy**.
- Supported multiple connection methods using **WireGuard**, **Tailscale**, **Outline**, **OpenVPN**, and **Hiddify** to address different client requirements and network constraints.
- Set up **observability** with **Prometheus**, **Grafana**, **Alertmanager**, and Telegram notifications; maintained approximately **99% uptime** over the last year.
- Applied **secure access patterns** by limiting administrative exposure, using private connectivity paths, and minimizing direct public reachability of internal components.

HomeLab / Self-Hosted Storage & Edge Infrastructure

- Designed and operated a self-hosted **Linux** home lab focused on **storage reliability**, **edge networking**, **secure remote administration**.
- Built a **mirrored NAS** environment with **daily replication** to reduce data-loss risk and improve resilience.
- Deployed **DNS filtering** and **VPN connectivity** using **WireGuard**, **Tailscale** and **AdGuard**.
- Built a **containerized media platform** with **inter-service automation**, **segmented routing**, and integrated remote access, enabling centralized maintenance and reliable communication across workloads.
- Implemented **VLAN isolation** and **firewall rules** to improve segmentation, access control, and security boundaries across the lab.

Skills

Infrastructure & OS: Linux, Docker, Kubernetes, Terraform, Helm, Git, GitLab CI/CD, Infrastructure as Code (IaC)

Networking & Access: TCP/IP, DNS, Reverse Proxy, HAProxy, Nginx, Traffic Routing, Secure Remote Access, VPN Services, Access Control, Firewall Rules, VLAN configuration

Connectivity: WireGuard, Tailscale, Outline, Hiddify, OpenVPN, AmneziaWG, AdGuard

Observability & Operations: Prometheus, Grafana, Alertmanager, Monitoring, Metrics, Dashboards, Alerting, Logging, Operational Troubleshooting, Service Reliability

Automation & Scripting: Python, Bash, Cron, SQLite

Cloud Platforms: AWS, GCP, Yandex Cloud

Education

2017 - 2020: **Computer Science** | LIT

2017 - 2020: **Software Engineering** | Yandex University

Languages

English - C1 | Russian - Native | Hebrew - A2
